Modifying a DN-24J8 jumper bar to the required number of poles

- 1) Place the insulating part into the jumper bar and insert screws, based on number of poles required. (For instance, in the following example, 5 poles are required). Click into place.

- 2) Using a cutting tool, cut the insulating part at the edge of the jumper bar (see below).

- 3) Hold the metal jumper bar and insulating jumper with two hands, placing fingers to the left and right of the pole you wish to cut, repeatedly flexing up and down (1 or 2 times should be sufficient) until the jumper bar and insulating jumper break in two.

- 4) Remove the small remaining piece of jumper (see below). This is important to ensure appropriate insulation distance in the case of contiguously applied jumpers in sequence. This step also facilitates the placement of a separator terminal if the bridge is positioned as the last terminal of a group.

- 5) The jumpers now are ready to be screwed onto DN-T8 series terminal blocks.
